	<i>Quick A-Z Guide to the Evidence</i>	xvii
	<i>Acknowledgments</i>	xxi
	<i>Introduction: Evolution as a Predictive Science</i>	xxiii
<b>1</b>	<b>Understanding the Natural World: Evolution and the Process of Science</b>	<b>1</b>
	Definitions of Science and Scientific Theory	1
	Definition of Evolution	2
	How Evolution Occurs	3
	Adaptation and Natural Selection	3
	Natural Selection and Fitness	5
	Proximate versus Ultimate Causation	6
	Products of Evolution	7
	<i>Transitional Forms</i>	7
	<i>Complexity</i>	7
	<i>Extinction</i>	8
	<i>Artificial Selection</i>	8
	<i>Adaptive Radiation</i>	8
	<i>Homologous and Analogous Features</i>	8
	<i>Exaptations</i>	9
	<i>Vestigial Traits</i>	9
	Evolution in Action: The Modern Threat of Antibiotic Resistance	9
	Summary	12
<b>2</b>	<b>Age of Earth</b>	<b>13</b>
	Prediction	13
	Theories of Earth's Age	14

<i>Scriptural Claims about Earth's Age</i>	14
<i>Using Seas and Salt to Estimate Earth's Age</i>	18
<i>Sedimentation Rates as a Measure of Time</i>	19
<i>Geological Formations as Evidence of Earth's History</i>	23
<i>Earth's Age as a Function of Temperature</i>	25
Radioactivity and Radiometric Dating	26
<i>Radioactivity</i>	26
<i>Radiometric Dating</i>	27
<i>What Isotopes Occur in Nature?</i>	28
<i>Using Radioactivity to Determine the Ages of Rocks</i>	29
<i>Other Radiometric Methods</i>	33
Fission-Track Dating	33
Thermoluminescence	33
Paleomagnetism	33
Creationists' Claims about Radiometric Dating	34
The Age of Earth	34
Summary	35
<b>3 Fossils</b>	<b>37</b>
Predictions	37
We See Direct Evidence of the History of Life on Earth	40
<i>How and Where Do Fossils Form?</i>	40
<i>Is the Fossil Record Complete?</i>	44
The Fossil Record Can Be Matched with Geologic Evidence to Describe the History of Life on Earth	45
<i>Fossils in the Sediments and Biostratigraphy</i>	46
<i>Creationists' Objections to Biostratigraphy</i>	49
<i>Fossilized Invertebrates</i>	52
<i>Evolutionary Lineages for Vertebrates</i>	53
<i>The Fossil Record, "Sudden Appearance," and the Cambrian Explosion</i>	55
The Fossil Record Includes Transitional Forms Linking Different Groups of Organisms	57
<i>Missing Links</i>	57
<i>Transitional Forms</i>	58
<i>Archaeopteryx: From Dinosaurs to Birds</i>	58
<i>Tiktaalik: From Fish to Land Vertebrates</i>	60

Environmental Changes and Competition Inherent in Natural Selection Produce Extinctions	63
<i>Fossils as Evidence of Extinction</i>	63
<i>Cuvier's Theory of Extinction</i>	63
<i>Background Extinction</i>	65
<i>Mass Extinction</i>	66
<i>The K-T Extinction</i>	66
<i>The Permian-Triassic Extinction</i>	68
<i>Human-Caused Extinction</i>	72
Summary	75
<b>4 Biogeography</b>	<b>77</b>
Predictions	77
Darwin's Observations of Life's Diversity	77
Life Is Extremely Diverse, and This Diversity Is Influenced by Geologic History	78
<i>Earth's Biodiversity</i>	78
<i>Biogeography</i>	80
<i>Early Theories of Biogeography</i>	83
Species That Are Most Alike Usually Live Near Each Other Geographically, Regardless of Differences in Environment	84
<i>Biogeography in the Age of Exploration</i>	84
<i>Biogeography and Geology</i>	86
Major, Long-term Changes in the Distribution of Life's Diversity Are Influenced by Plate Tectonics	87
<i>Continental Geography</i>	87
<i>Continental Drift</i>	88
<i>Geologic Evidence of Continental Movement</i>	90
<i>Paleomagnetism</i>	92
<i>Radiometric Dating of the Seafloor</i>	92
<i>Pangaea and Biogeography</i>	92
<i>Tectonic Movement and Evolution</i>	94
Different Species in Similar Habitats Often Evolve Similar Adaptations	95
<i>Convergent Evolution</i>	95

Isolated Habitats Such as Oceanic Islands Are Populated by Descendants of Organisms from the Nearest Mainland	97
<i>Continental and Oceanic Islands</i>	97
<i>Colonization of Oceanic Islands</i>	98
<i>Island Species and Mainland Species</i>	99
<i>Adaptive Radiation</i>	99
<i>Unique Features of Island Biogeography</i>	101
<i>Creationists' Explanations for Biogeography</i>	103
Summary	105
<b>5 Molecular Evidence for Evolution</b>	<b>107</b>
Predictions	107
Common Ancestry Is Revealed by a Common Hereditary Material (DNA or RNA)	108
Related Organisms Reveal Their Genetic Similarity through Protein Similarity	108
<i>Antigen Specificity</i>	108
<i>Protein Relatedness</i>	111
Ubiquitous Proteins Exist in Seemingly Disparate Taxa	111
<i>Ubiquitous Proteins</i>	111
<i>Cytochrome c</i>	113
<i>Hemoglobin</i>	114
Organisms with More Recent Common Ancestry Have More Hereditary Material in Common Than Organisms Further Removed Evolutionarily	114
<i>DNA Hybridization</i>	114
<i>Genetic Sequence Data</i>	116
<i>Genomes and Genetic Timelines</i>	116
Comparing the Coding Regions of Ubiquitous Proteins Confirms Common Ancestry	117
<i>Genes as Evidence of Common Descent</i>	117
<i>Heat-Shock Proteins and Adaptation</i>	118
Organisms with Common Ancestry Share Randomly Generated Transposable Elements and Homologous Genes	118

<i>Transposable Elements and Shared Ancestry</i>	118
<i>Gene Duplication</i>	119
Shared Ancestry Is Inferred through the Occurrence of Vestigial Molecular Elements, or Pseudogenes	119
<i>The Origin of Pseudogenes</i>	119
<i>Pseudogenes as Evidence of Common Inheritance</i>	119
Shared Ancestry Is Revealed within a Lineage Showing Evidence of a Shared Viral Pathogen	120
<i>Endogenous Retroviruses and Common Descent</i>	120
Summary	121
<b>6 Anatomical Evidence for Evolution</b>	<b>123</b>
Predictions	123
There Are Anatomical Similarities among Related Organisms	124
<i>Comparative Anatomy</i>	124
<i>Homologous Structures</i>	125
<i>Structural Similarities in Plants</i>	126
<i>Analogous Structures and Convergent Evolution</i>	127
Organisms Possess Vestigial Structures That Serve as Evolutionary Baggage	127
<i>Vestigial Structures as Remnants of         Ancestral Organisms</i>	127
<i>Creationists' Criticisms of Vestigial Organs         as Evidence of Evolution</i>	129
There Are Developmental Similarities among Organisms	129
<i>Developmental Similarities</i>	129
<i>Embryological Similarities</i>	129
<i>Development and Embryology as Evidence         of Common Ancestry</i>	130
<i>The Study of Evolutionary Development</i>	131
<i>Homeotic Genes</i>	131
<i>Developmental Variation</i>	131
<i>Eye Development and Animal Evolution</i>	133
Summary	134

<b>7</b>	<b>Conflict and Cooperation Part I: Behavior</b>	<b>135</b>
	Predictions	135
	Behavior	136
	Organisms Exhibit Behaviors That Increase Their Chances of Survival	137
	<i>Tropic or Taxic Behavior</i>	137
	<i>Migration</i>	138
	<i>Thermoregulation</i>	138
	<i>Storage and Retrieval</i>	139
	Behavioral Adaptations That Enhance Survival Are Selected over Those That Do Not, Even When a Cost Is Incurred by Other Individuals in the Population	140
	<i>Egg Eviction by Birds</i>	140
	<i>Conspecific Infanticide</i>	140
	Behaviors, Like Other Measurable Adaptations, Can Be Artificially Selected	141
	<i>Experimental Manipulation of Behavioral Traits</i>	141
	<i>Heritability of Behaviors</i>	142
	Individuals Behave Preferentially toward Kin When There Is Likely to Be an Inclusive Fitness Benefit	143
	<i>Altruistic Behavior and Kin Selection</i>	143
	<i>Helping</i>	144
	<i>Alarm Calling</i>	147
	<i>Suicide</i>	147
	<i>Worker Castes</i>	148
	<i>Altruism by Reciprocal Exchange</i>	149
	Individuals Exhibit Behaviors That Serve Simply to Acquire Mates	149
	<i>Sexual Selection</i>	149
	<i>Intrasexual Competition</i>	149
	<i>Intersexual Selection and Behavior</i>	150
	<i>Theories of Female-Choice Mechanics</i>	151
	There Is an Adaptive Advantage in Behaviors That Help Ensure Parentage	154
	<i>Competitive Sperm</i>	154
	<i>Cooperative Sperm</i>	156
	<i>Sperm Competition and Behavior</i>	157

In a Conflict between Individual Survival and Reproductive Potential, Reproductive Potential Wins	157
<i>Destructive Reproductive Behavior in an Evolutionary Context</i>	157
Parents Behave Preferentially toward Those Offspring Most Likely to Augment the Parents' Inclusive Fitness	158
<i>Differential Treatment of Offspring</i>	158
<i>Parental Favoritism of the Sexes</i>	158
<i>Siblicide</i>	159
Summary	159
<b>8 Conflict and Cooperation Part II: Coevolution</b>	<b>161</b>
Predictions	161
Coevolution	162
Ecological Relevance	162
Prey Species Possess Ecologically Relevant Adaptations against Predation	162
<i>Coloration, Mimicry, and Warning Signals</i>	162
<i>Toxic Emissions and Secretions</i>	164
<i>Influence of Predation Pressure</i>	164
<i>Third-Party Exploitation</i>	165
Predators Possess Ecologically Relevant Adaptations That Allow Them to Conquer Prey	165
<i>Coloration in Predators</i>	166
<i>Odor Used to Attract Prey</i>	166
<i>Selection for Predatory Ability</i>	167
Organisms Exploit Different Ecological Niches to Reduce the Negative Effects of Competition	168
<i>Character Displacement and Niche Partitioning</i>	168
<i>Displacement from Antagonistic Coevolution</i>	168
<i>Diversifying Coevolution</i>	168
Parasites Evolve Strategies That Allow Them to Exploit Host Resources	169
<i>Reciprocal Adaptations</i>	169
<i>Selection-Driven Virulence in Parasites</i>	170
<i>Parasite-Mediated Behavior and Coevolutionary Escalation</i>	171

Host Species Evolve Ways to Minimize the Costs of Being Parasitized	173
<i>Parasite-Host Coevolution in Avian Brood Parasites</i>	173
<i>Specificity of Hosts and Intensity of Reciprocal Adaptations</i>	173
<i>Host Tolerance</i>	174
<i>Host Responses to Parasitism</i>	174
Symbiont Species That Serve a Life-History Function Are Rewarded and Continue	175
<i>Mutualism</i>	175
<i>Obligate Mutualism</i>	175
<i>Mutualism in the Oceans and Atmosphere</i>	177
Rewarded Symbionts Are Penalized for Cheating	177
<i>Penalties in the Cleaner-Fish Symbiosis</i>	178
<i>Penalties in the Yucca-Yucca Moth Symbiosis</i>	178
Summary	178
<b>9 Human Evolution</b>	<b>179</b>
Predictions	179
Human Evolution: Biogeographic Evidence	180
<i>Sites of Origin</i>	180
<i>Darwin's Prediction: The African Origins of Humans</i>	181
Human Evolution: Fossil Evidence	181
<i>Dart's Discovery of Hominin Fossils</i>	181
<i>Other Hominin Discoveries in Africa</i>	182
<i>Africa as the Birthplace of Humanity</i>	188
Human Evolution: Molecular Evidence	188
<i>Universal Homology, Ubiquitous Proteins, and Human Evolution</i>	188
<i>Fossil Genes in the Human Genome</i>	189
<i>Humans and the MC1R Gene</i>	191
<i>Humans and Endogenous Retroviruses</i>	193
Human Evolution: Anatomical and Developmental Evidence	193
<i>Vestigial Body-Parts</i>	193
<i>Human Development and Evolutionary History</i>	193

Human Behavior from an Evolutionary Perspective	194
<i>Behavior as an Adaptation in Humans</i>	194
<i>Kin Preference in Human Behavior</i>	195
<i>Mating in the Evolved Human</i>	195
<i>Paternity Assurance in the Human Male</i>	198
<i>Parental Favoritism as an Adaptation</i>	200
Human Evolution: Coevolutionary Evidence	201
<i>The Shared Evolution of Humans and Plasmodium</i>	202
<i>Coevolution with Pathogens and HIV Resistance</i>	203
<i>Coevolution with Pathogens and Urban Living</i>	204
<i>Human Exploitation of Third-Party Organisms</i>	204
<i>The Coevolved Human and Mate Choice</i>	205
<i>Human Coevolution and Lactose Tolerance</i>	205
Summary	206
<i>Appendix 1. Charles Darwin's On the Origin of Species (1859, first edition), Chapters IV ("Natural Selection") and XIV ("Recapitulation and Conclusion")</i>	207
<i>Appendix 2. The Geologic Timescale</i>	257
<i>Appendix 3. Major Species of Known Hominins</i>	263
<i>Glossary</i>	267
<i>References</i>	285
<i>Index</i>	311
